

Photo 11 (June 6, 2000): View (to the east) of the alternate transmission line alignment from an alternate structure location that would be on the east bank-side of the Rio Grande River crossing. Note agricultural usage of alternate transmission line route from structure location to the Silas Ray Power Plant in the background.

Photo 12: (June 6, 2000): View (to the west) of the alternate transmission line alignment from an alternate structure location that would be on the east bank-side of the Rio Grande River crossing. Mexico is in the background on the far side of the Rio Grande (river is visible across center of photo). The anticipated tie with the existing 69/138 kV transmission line owned by CFE can be seen in the background at the transmission line tower (center of photo).
